# MANAGED DETECTION & RESPONSE FOR THE EXTENDED ECOSYSTEM

## Pinpoint and respond to threats across your attack surface with Rapid7 MXDR

The threat landscape has compounded and teams are feeling the squeeze to keep up. Global enterprises are now utilizing an average of 45 cybersecurity tools[1] in their environment, leading to siloed data, blind spots, and inefficiencies–and this tool sprawl isn't going anywhere.

As cybersecurity veterans with over two decades of experience as a foundational security provider, we understand that building a comprehensive program looks different for each organization. We've purpose-built our Managed Detection and Response (MDR) engine on top of native XDR technology to deliver built-in visibility across endpoint, network, identity, and cloud, enabling our global security operations center (SOC) to zero-in on actionable and high-fidelity threats no matter where they originate.

In today's climate, our charter as an MDR provider is clear: anticipate risk, bring comprehensive visibility to the attack surface, and respond quickly and completely to threats as they arise. Now, MDR customers are able to connect the established point solutions already in their environment for triage, investigation, and response from the Rapid7 SOC. With extended ecosystem monitoring as part of Managed Threat Complete, we're widening our view of your environment and responding to more than ever before.

## KEY BENEFITS:

**Multi-Vector attack visibility**
Synthesize your view of abnormal activity across your attack surface, layering our leading native capabilities with valuable alert context from other established point-solutions (EPPs, CSPs, IAMs, etc.)

**Customized defense in depth**
Our MDR Insight engine natively collects telemetry across endpoint, cloud, identity, network, and user. Now, customize your service by connecting and layering detections from the tools already in your environment to augment and expedite investigations.

**Comprehensive response**
By extending the MDR service to detect, triage, and investigate third party event sources, our analysts have more context and methods to immediately contain malicious behavior before it can cause harm to your environment, business, and brand.
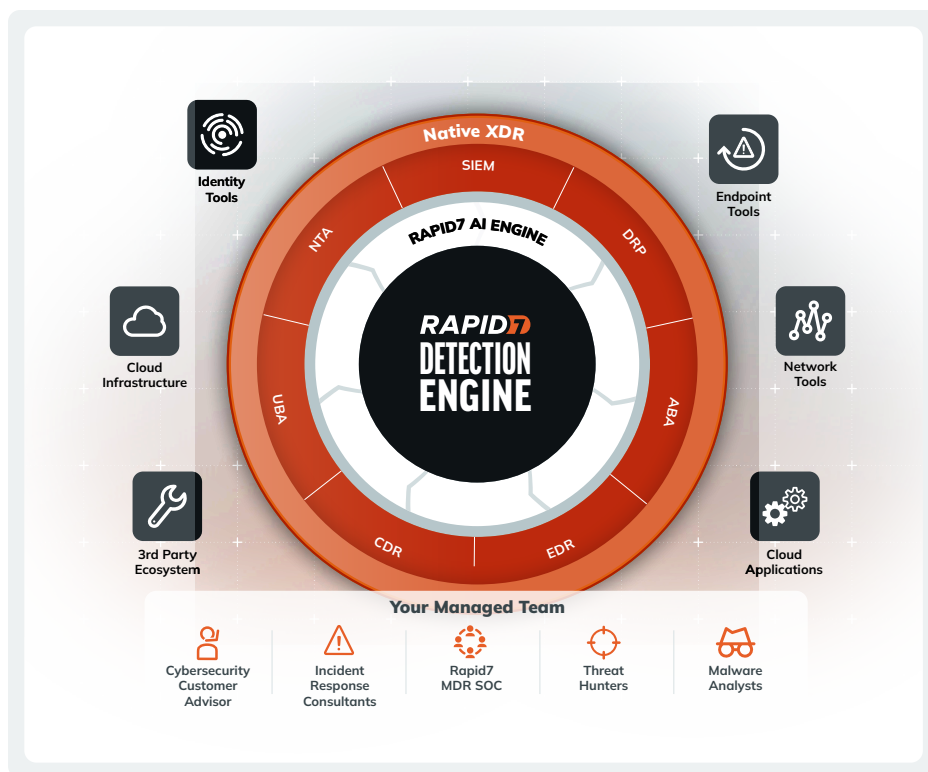

Managed Threat Complete is designed to meet you where you are in your security journey and grow alongside you, with expert security consultation, coaching, and individualized partnership that builds resilience and instantly extends your team. By expanding coverage to the tools already in your environment, we're bringing sophisticated defense in depth to stop the advanced attacks others miss.

## Experience the future of MDR with Managed Threat Complete

### Defense in depth

Native layered visibility across endpoint, cloud, identity, network, and user–extended to include third-party data sources to supplement and enrich investigations–provides a correlated and  multi-layered view of your entire attack surface mapped to the MITRE ATT&CK framework.

### Proactive risk management

Unaddressed risks become actionable threats in an instant. With native connections to industry-leading enterprise vulnerability management technology, Managed Threat Complete brings robust exposure management into the MDR purview, shrinking your attack surface and solidifying your defenses.

**Unlimited incident response**

Whether it's a user that's been phished, a vulnerability exploited, widespread lateral movement, or signs of something more sinister — Rapid7 MDR has you covered. Unlimited incident response means no additional costs or hidden caps, providing you with complete DFIR included in the service in the event of a breach.

**Transparent MXDR eradicates threats**

With complete access to InsightIDR's SIEM and XDR technology, you've got control. Utilize the technology on your own and as your window into Rapid7 SOC activity — you get direct line of sight into active threats, investigations, and outcomes.

## About Rapid7

Rapid7 is creating a more secure digital future for all by helping organizations strengthen their security programs in the face of accelerating digital transformation. Our portfolio of best-in-class solutions empowers security professionals to manage risk and eliminate threats across the entire threat landscape from apps to the cloud to traditional infrastructure to the dark web. We foster open source communities and cutting-edge research–using these insights to optimize our products and arm the global security community with the latest in attacker methodology. Trusted by more than 11,000 customers worldwide, our industry-leading solutions and services help businesses stay ahead of attackers, ahead of the competition, and future-ready for what's next.
